

WEB TECHNOLOGY MINI PROJECT

TOPIC : Online Food Order System

Aim : The main objective of the Online Food Order System is to manage Item categories, Food, Orders, Delivery address and Cart.

Abstract : Online Food ordering is the process of ordering food from a website. The aim of developing the system is to replace the traditional way of taking orders with computerized system. The process consists of a customer choosing the restaurant of their choice, scanning the menu items, choosing an item, and finally choosing for pick-up or delivery. Payment is then administered by paying in cash at the restaurant when going to pick up and an order number for the placed order is generated. At the administrator end, the admin can edit website details, add or remove food items or restaurants and view the order transactions.

In a glance the structure of the project can be viewed as below :

1.Before Login

- Login
- Register
- Administrator Login
- About Us
- Contact Us

2. After Administrator Login

- Edit Website Details
- Add Food Items
- Remove food Items
- Add Restaurants

- Delete Restaurant
- Logout

3. After User Login

- My Profile
- Menu
- Search Food Items
- My Cart
- Order
- Logout
